OFFICE OF FACILITIES PLANNING & CONSTRUCTION

INTRODUCTION

Today's students are learning to be critical thinkers and creative innovators. They are moving beyond being consumers of information and are becoming creators of content. They are collaborating in teams and leveraging their collective intelligence to become effective problem solvers in service of our community, and they are honing their communication skills to become both respectful teammates and our future leaders.

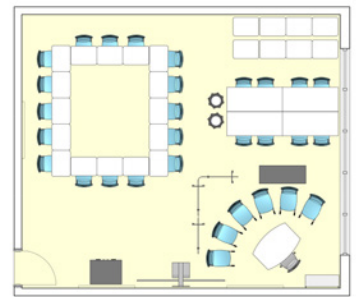

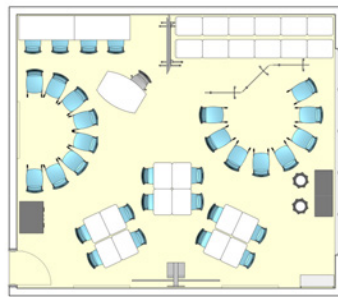

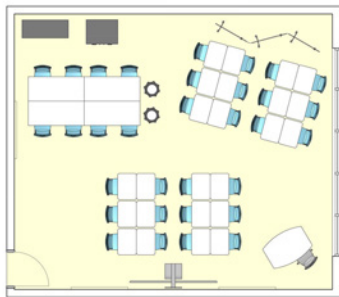

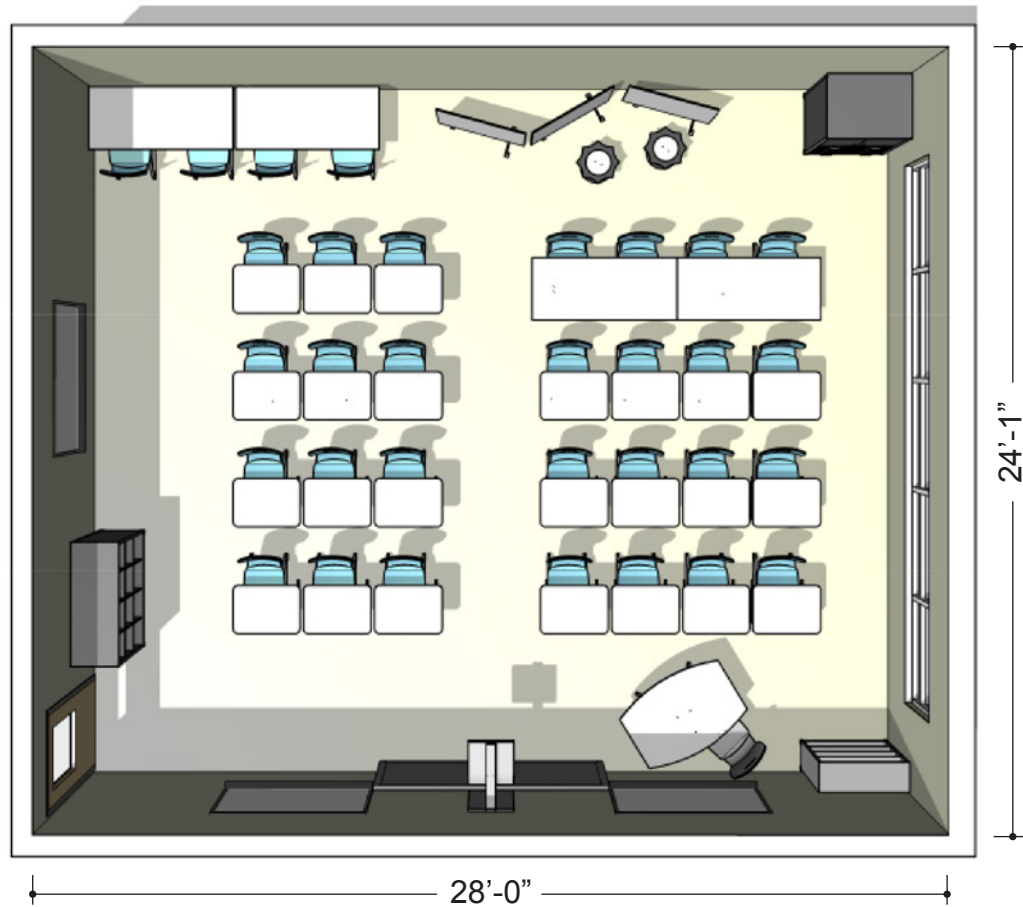

You know these learning activities as the 5 C's of 21st Century Skills, and having the right type of learning environments, coupled with passionate and heroic teaching, will enable our young people to acquire and develop these skills into lifelong "habits of the mind".

What does a 21st Century Learning Environment look like? It is flexible and adaptable enough to provide opportunities for multiple learning configurations within a "classroom", from individual study, to small group collaborative work, to large group sharing and more traditional lecture. Beyond the "classroom", every space is within the school walls (and also outside of the school walls) is planned and programmed to support learning anytime, anywhere. Furniture is both mobile and transformable so that space can easily be reconfigured to support varied learning modalities. Chairs are comfortable and provide both workspace and storage space. Furniture for other types of sitting is available giving the students (and teachers) choice. Tables can be nested together to support collaboration or they can be stacked and consolidated to free up space for more active learning. Standing and moving about is encouraged as movement supports a greater focus on learning and also a healthier lifestyle. Markable walls, markable furniture surfaces and educational technology tools are distributed around the space to allow the transition of the learning environment from teacher-directed to student-centered. There is space and furniture to not only store the raw materials of learning but also to display and celebrate the work of the learners. And last but not least, electric power is abundant and distributed and wireless bandwidth is robust.

This Furniture Idea Book is designed to provide secondary school leaders with both a resource and a tool to begin planning 21st Century Learning Environments within your school, even if your school is a facility that was built forty to fifty years ago. As you begin your journey, please know that this is only a beginning, and that every day, educational planners and furniture designers are adding to the idea and product landscape in support of high-quality learning environments for today's learners. So be curious. Make your decisions in the context of what is best for learning. And let your only limitation be your imagination.
