Featured Resource

Webinar: Designing Safe Schools

Each day, schools and school districts are responsible for providing a safe and healthy learning environment for students. Understanding how to design and maintain school buildings is an important part of supporting that environment. Mitigation, or the capabilities necessary to eliminate or reduce the loss of life and property damage by lessening the impact of an emergency, is just one way schools can work to maintain a safe and healthy learning environment, as outlined in Presidential Policy Directive 8, our nation's approach to preparedness. Through planning and research, schools and school districts can work to understand how the safety of the school building directly impacts the health, safety, and educational experience of students and staff.
